

An Internship Report
Of
Web Development Internship

Submitted

To

School of Computer Science and Engineering
IILM University, Greater Noida, U.P.

In partial fulfilment of the requirement of degree of

B.Tech (Computer Science and Engineering)

By

Roll Number of Student: 25SCS1003004087

Name of Student: AYUSH DUBEY

Batch: 2025-2029

Candidate's Declaration

I, AYUSH DUBEY, do hereby declare that the internship report titled “Web Development Internship” has been completed by me to fulfil the requirement for the award of the degree of Bachelor of Technology in Computer Science and Engineering.

The work presented in this report is based on the learning, practical activities and project implementation carried out during my two-month internship at Codec Technologies Pvt. Ltd. I have made sincere efforts to present the work accurately and have acknowledged the references and resources used.

I further declare that this report has not been submitted to any other institute for the fulfilment of any degree or diploma requirement, and I shall be solely responsible for any copyright violation arising from material reproduced without appropriate acknowledgement.

Signature:-

Student Name: AYUSH DUBEY

Roll No.: 25SCS1003004087

²Acknowledgement

I am using this opportunity to express my gratitude to everyone who supported me throughout the Internship Program. I am thankful for their guidance, constructive criticism and friendly advice during this work.

I would like to thank Codec Technologies Pvt. Ltd. for providing me the opportunity to gain hands-on exposure to web development and for encouraging practical, project-based learning. The internship helped me connect classroom concepts with the development of a working web application.

I am also thankful to my institute, IILM University, Greater Noida, and the faculty of the School of Computer Science and Engineering for their continuous support and encouragement.

I express my gratitude to my parents and friends for their blessings, motivation and support.

Internship Completion Certificate

Internship Offer Letter

INTERNSHIP OFFER LETTER

Dear Piyush dubey,

We are pleased to offer you a 2 Month Internship as Project Intern at Codec Technologies, a global platform dedicated to empowering learners and connecting diverse talent to create meaningful career opportunities worldwide. Codec Technologies delivers dedicated IT and business consultancy services across 27+ countries, empowering global innovation and strategic growth.

Internship Details:

- Designation : Web Developer Intern
- Location & Mode: Pan India, Hybrid
- Duration : 01/06/2026 to 01/08/2026
- Reporting to : Assigned Project Head(s)

This program provides an immersive experience, enabling you to gain industry-level knowledge and acquire valuable skills. Exceptional interns may also qualify for a scholarship award based on weekly performance reviews conducted by project supervisor.

If you accept this offer and the terms above, please complete your assigned projects and training tasks on our platform and via email.

Best regards,

Sincerely,

Dr. Anurag Shrivastava,
Codec Technologies India
NCS ID: E19E86-0116588288923
Date Of Issue - 01/06/2026

Dr. Anurag Shrivastava
Talent Acquisition Manager

Introduction & Organization Profile

4.1 Introduction

This report presents a detailed account of the two-month Web Development Internship undertaken at Codec Technologies Pvt. Ltd. from 01 June 2026 to 01 August 2026. The internship formed part of the practical learning requirements of the Bachelor of Technology (Computer Science and Engineering) programme at IILM University, Greater Noida.

The internship focused on strengthening practical web-development skills through structured learning, hands-on implementation and iterative testing. Particular emphasis was placed on understanding how a web interface is designed, how client-side logic changes the page dynamically, how data can be stored in the browser, and how a project can be refined through testing and debugging.

As a practical implementation of these concepts, TaskFlow was developed as a responsive browser-based task-management dashboard. The project brings together semantic HTML, responsive CSS, JavaScript-based interaction and browser LocalStorage in one complete learning application.

4.2 Organization Profile

Codec Technologies Pvt. Ltd. is a technology-oriented organization that provides software, IT and learning-focused opportunities. The internship environment provided exposure to practical development activities and encouraged the application of programming concepts through project work.

During the internship, the focus was on common web-development workflows: understanding requirements, structuring pages with HTML, styling interfaces with CSS, adding behaviour with JavaScript, testing features in a browser, identifying errors through developer tools and improving the implementation through iteration.

The experience helped bridge the gap between learning individual technologies and using them together in a functioning web application.

Problem Statement & Project Objectives

4.3 Problem Statement

Students can learn HTML, CSS and JavaScript separately yet still face difficulty when these technologies must be combined into a complete, usable application. A practical project is useful for understanding the flow from user input to interface updates, data handling, validation, persistence and testing.

The problem addressed through TaskFlow was to create a simple task-management dashboard that allows a user to add tasks, assign a priority and due date, mark work as completed, remove tasks and filter the displayed list. The application also needed to remain

usable on different screen sizes and preserve task data between browser sessions.

4.4 Project Objectives

- Build a responsive web interface using HTML5 and CSS3.
- Implement interactive features using JavaScript and DOM manipulation.
- Create TaskFlow as a practical task-management dashboard.
- Support task creation, completion, undo, deletion and filtering.
- Store task data locally using browser LocalStorage.
- Display dashboard statistics such as total, pending and completed tasks.
- Implement dark mode and responsive layouts for different screen sizes.
- Practice debugging, browser testing and project documentation.

Scope & Technologies / Tools Used

4.5 Scope of the Project

The scope of TaskFlow covers a browser-based task-management dashboard. The application accepts task information from the user, displays tasks as interactive cards, supports completion and deletion, provides All/Pending/Done filters, calculates basic dashboard statistics and stores task data using LocalStorage.

The project is intentionally limited to a client-side learning application. It does not include a server, user authentication, cloud database or multi-user collaboration. These limitations keep the project suitable for demonstrating core front-end development concepts while leaving clear opportunities for future enhancement.

4.6 Technologies and Tools Used

Technology / Tool	Purpose	Application in TaskFlow
HTML5	Page structure	Semantic layout, forms and task containers
CSS3	Presentation	Responsive layout, cards, controls and dark mode
JavaScript ES6	Client-side logic	Task operations, filters, statistics and UI updates
LocalStorage	Persistence	Saving and loading tasks in the browser
VS Code	Development	Writing and organizing project files
Git / GitHub	Version control	Project backup and source management
Chrome DevTools	Testing	Debugging layout, console and browser behaviour

System Architecture & Methodology

4.7 System Architecture

Presentation Layer

HTML5 + CSS3

Page structure, forms, cards and responsive styling.

Logic Layer

JavaScript ES6

Task creation, completion, deletion, filtering and statistics.

Persistence Layer

Browser LocalStorage

Stores task data between browser sessions.

Interaction Layer

DOM manipulation

Updates tasks, counters and controls without reloading.

Testing Layer

Chrome DevTools

Checks console errors, responsive behaviour and interactions.

4.8 Methodology

Step	Stage	Description
1	Requirement understanding	Identified the main user actions and information required.
2	Interface design	Planned a clean responsive layout with task cards and controls.
3	Implementation	Built structure with HTML5, styling with CSS3 and behaviour with JavaScript.
4	Data persistence	Connected LocalStorage so tasks could be restored after refresh.
5	Testing & debugging	Tested common actions and corrected layout or logic issues.
6	Refinement	Improved responsiveness, usability, dark mode and presentation.

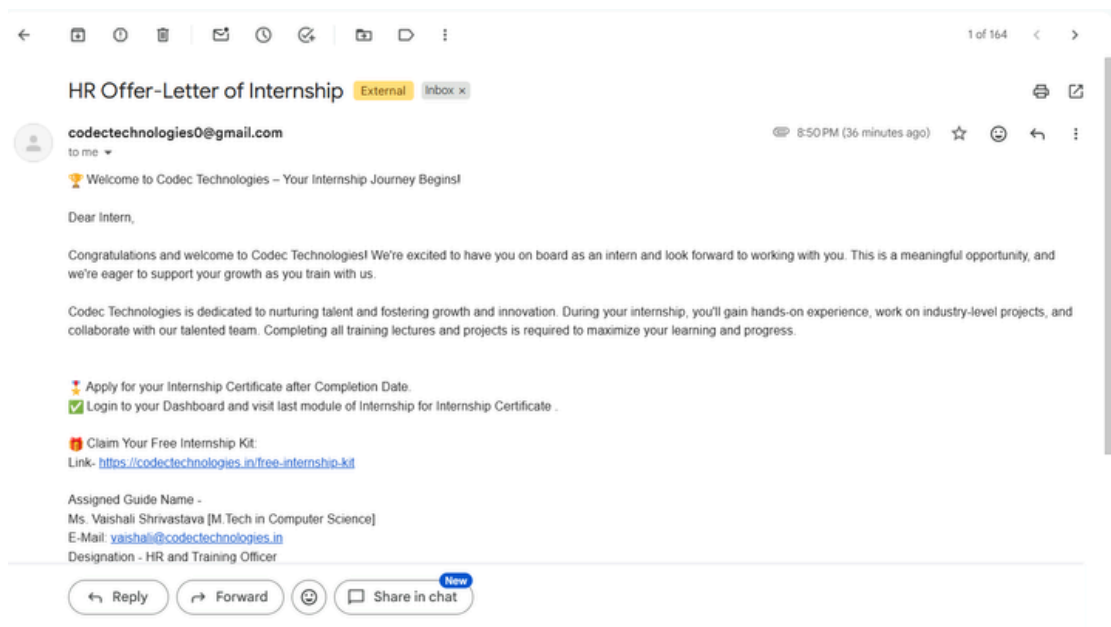

Expected Outcomes & Communication Proof

4.9 Expected Outcomes

- Improved understanding of responsive front-end web development.
- Practical experience with HTML5, CSS3 and JavaScript ES6.
- Better understanding of DOM manipulation and event-driven interaction.
- Experience using LocalStorage for browser-side persistence.
- Ability to structure a small application from requirements through testing.
- Improved debugging and problem-solving using browser developer tools.
- Greater awareness of responsive UI/UX principles and project documentation.

4.10 Certificates of Completion and Communication Proof

The internship completion certificate and offer letter are included in Chapter 3 as supporting documentation. The following communication proof is the actual Codec Technologies internship welcome / HR email received during the internship.

Internship Communication & Project Evidence

Internship Communication Details

Assigned Guide	Ms. Vaishali Shrivastava [M.Tech in Computer Science]
E-Mail	vaishali@codectechnologies.in
Designation	HR and Training Officer
Internship Role	Web Developer Intern
Duration	01/06/2026 to 01/08/2026
Location & Mode	Pan India, Hybrid
Reporting	Assigned Project Head(s)

TaskFlow — Practical Project Summary

TaskFlow is a responsive task-management dashboard developed as the practical project accompanying the web-development learning experience. A user can enter a task title, description, priority and due date, then manage the task through completion, undo and deletion actions.

The dashboard presents summary information such as total, pending and completed tasks and completion percentage. Filters allow the user to view All, Pending or Done tasks, while LocalStorage preserves data after a page refresh.

The project demonstrates a complete front-end workflow covering interface structure, responsive styling, client-side logic, data persistence, interaction handling, testing and refinement.

Note: No additional badge/dashboard screenshot has been inserted because no such personal evidence was supplied; the report uses the actual Codec communication provided.
